

## DOM COVID In-Patient Study Enrollment Workflow

- All DOM inpatient COVID studies must utilize this workflow to help limit researchers at the bedside, preserve PPE and maintain patient safety.
- COVID Research Team is staffed with experienced coordinators with in-patient infectious disease studies. Dr. Nathan Erdmann oversees this team. The team will review positive patients against the I/E criteria daily.

- As part of the screening process, the COVID Research Team will capture COVID+ inpatients, what studies the patient was deemed eligible for, and whether the study team was permitted to approach the patient for enrollment.
- COVID Therapeutic Team is a multi-disciplinary team of providers that will help guide study priorities. Members are from ID, Pulmonary, HemOnc, Rheumatology, and Pharmacy. This team meets weekly to discuss COVID treatments.
